

Business Intelligence and Dashboards

If your organization is like most, you have a wealth of data and unused knowledge tied up in your existing systems, databases and spreadsheets – making it nearly impossible to find and leverage the data needed to effectively run your business.

The Enbase Business Intelligence tool solves this problem by extracting the data you need, when you need it. This lightweight, but powerful solution integrates with all your enterprise systems, databases and spreadsheets to deliver a consolidated, graphical view of your data.

The Enbase Business Intelligence solution is a web-based tool that provides instant visibility into your vital business information. It offers interactive dashboards for real-time tracking and monitoring of business performance versus corporate goals and key performance indicators (KPI's). Dynamic reporting, scorecarding and analytics are also included for proactive management of projects, customers, employees and more.

Key Benefits and Capabilities

- Drill-down and drill-through all the way to the asset, transaction or work order level
- Custom, real-time reporting capabilities
- Seamless connection with Oracle, JDE, SAP and other enterprise systems and databases
- Deploys in days, not months
- Alerts for proactive monitoring and tracking
- Discussion module for instant collaboration and knowledge sharing
- Set benchmarks and thresholds and receive alerts when performance falls below or exceeds targets
- Custom home pages for each user, division, customer, etc.
- Extremely affordable

Dashboards

Enbase dashboards empower your business by providing custom, configurable environments for any user – from the CEO to field technicians. With drill down and drill thru capabilities, your entire organization can quickly uncover hidden trends and opportunities in your data, and then apply that knowledge to make better business decisions.

An Enbase Dashboard is also an excellent way to better communicate with your customers. Customers become entrenched when they are able to see the services and performance you are providing them within a graphical, real-time dashboard.
